

### **Guidelines for using drones in protected areas**

The Environment Agency draws attention to Article 6. Act no. 60/2013 on general duty of care stating that everyone is obliged to take good care of the nature of the country and show extreme caution so that it is not spoiled. In constructions, activities, operations and other activities affecting nature, everything that can reasonably be expected to prevent natural damage must be done.

Guidelines:

- Always stay on authorized paths/tracks/roads.
- Important is to follow rules of conduct that apply to the area.
- An unmanned aircraft should never be flown in close proximity to people. Please take precaution not to disturb people's experience, their safety or personal privacy nor the general peace of the protected areas being filmed.
- According to Icelandic law it is forbidden to fly close to cliffs where birds nest. An unmanned aircraft should never be flown near animals or birds, neither in nesting areas nor during nesting season or any other seasonal time when animals or bird habitats are considered vulnerable.
- Flight time should be kept to a minimum and flight should be avoided during the area's busiest times of the day.
- If the use of unmanned aircraft causes disturbance to wildlife in the area, its use should be ceased at once.
- The conductor of the unmanned aircraft is responsible for the aircraft within the protected area. This includes taking responsibility of any possible risk of harm to people, fauna and nature and leaving no permanent marks on the site in question. Should the aircraft crash, all components from it must be collected and removed from the area.
- For safety reasons, the person managing the unmanned aircraft must wear marked clothing so that it can be identified.
- It is forbidden to fly drones next to bird cliffs in a closer proximity than 200 meters during nesting season. For rest of the year it is not allowed to fly in a closer proximity to bird cliffs than 50 meters, if birds are in the cliffs.
- All disturbance to animals and wildlife is strictly prohibited.
- Off-road driving in Iceland is strictly prohibited.

Unmanned aircraft should take off and land in a safe distance from other visitors according to regulation 990/2017 on unmanned aircrafts.

The usage of a drone shall be according to regulation no. 990/2017 on the operation of remotely piloted aircraft (<https://www.icetra.is/aviation/drones/>).

Please note that according to the regulation all drones used for commercial flight need to be registered at the Icelandic Transport Authority.

A permission from the landowners and/or the municipality might be needed for the project.
